

Trip Planer(Hotel Booking)

Aim:

This project aims to design and develop a website for users who like to travel. The website will provide users a common place to book hotels, plan their trips, and will also be able to search for hotels according to the regions or places. The users will also have access to a map where they can compare all the nearest hotels to book, and will also be able to see directions on the map for the same.

User Accessed Platform:

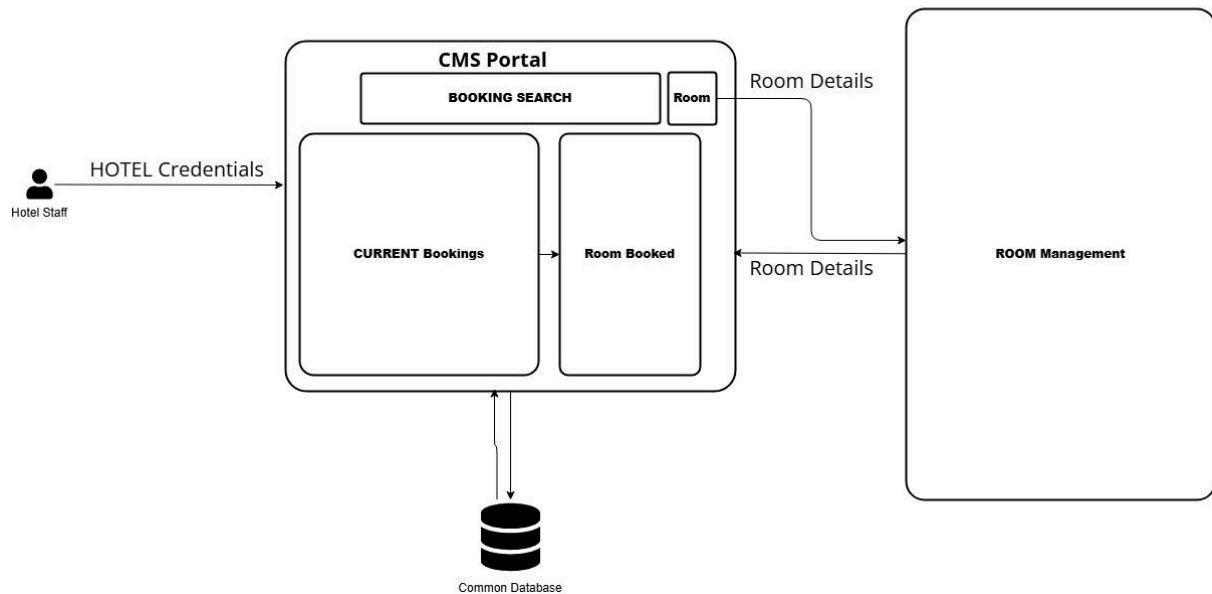

Users will register or login to the website. They will be able to book hotel rooms, plan their trips, manage or update their latest and previous trips, look for nearby hotels directly using the map and book the hotels.

User Accessed Website Architecture Diagram

Hotel Accessed CMS Portal:

The hotels will have access to a CMS portal where they will be able to manage their hotel bookings, customer details, payment details, and all other things.
